

Guy Ginat

Game Developer & Technical Director

New York, NY

guyginat4@gmail.com | [LinkedIn](#) | [GitHub](#) | guyginat.xyz

SUMMARY

Co-founder and Technical Director of a funded indie studio shipping an online co-op game on Steam in November 2026. I build multiplayer netcode, procedural generation, release pipelines and tools for designers, on a background of shipped mobile games and full-stack engineering.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, Lua, Ruby, SQL

Engines & Game Tech: Unity (Editor tooling, Addressables, Shader Graph, Timeline), Photon Fusion 2, FMOD, Steamworks, Godot (.NET), HarmonyX, Playdate

Web & Infrastructure: React, Next.js, Node.js, Flask, Rails, Elasticsearch, MongoDB, Firebase, Plastic SCM, Git

EXPERIENCE

Panda Paw – Co-founder & Technical Director, *New York, NY* 2026 – present
Funded five-person indie studio. *CatchUp* (online co-op) demo live on Steam and in Next Fest; launch Nov 11, 2026.

- Own the technical stack: **Unity 6**, host-authoritative **Photon Fusion 2** with client-predicted physics, FMOD, and **Steamworks** (lobbies, achievements, cloud save, leaderboards).
- Designed a netcode model where the whole world derives from two networked values, so late joiners rebuild the scene from a few bytes; cut per-player network state by about 25% while fixing client stutter.
- Built the release pipeline (Plastic SCM changeset to versioned build, Steam branch and Discord in one command), plus telemetry and crash reporting with build-tagged breadcrumbs.
- Led the **procedural level generator** for the studio's first title (about 54k lines): a deterministic, seed-synced 16-stage pipeline with a designer-facing Level Workbench and background-thread generation.

City Hive – Senior Software Engineer, *New York, NY* 2025 – 2026

- Worked on the build and release pipeline behind about 5,000 white-label commerce apps.

NYU Game Center – Graduate Teaching Assistant, *Brooklyn, NY* 2023 – 2025

- Mentored students in game design and development; ran **Unity** and **systems design** workshops.

NOVOS Games – Unity Lead Developer, *Tel Aviv, Israel* 2022 – 2023

- **Led** development and **shipped** an asynchronous multiplayer mobile game in **Unity**, live-operated through its first year.
- Built core gameplay, backend networking, analytics, Addressables content loading and tools in a team of 10; **recruited and onboarded** its developers.

Picafuel – Full Stack Developer, *Tel Aviv, Israel* 2020 – 2022

- Developed the fleet-management platform with **React**, **Node.js**, **Flask** and **Elasticsearch**, including a campaigns engine for driver-facing promotions.
- Built a **data migration automation system** that onboarded new clients' millions of records with no manual turnaround.

SELECTED PROJECTS

Local Multi-Control – Maintainer of a Slay the Spire 2 mod that drives the game's real multiplayer pipeline locally for 2–12 characters; C#, HarmonyX; 445 Steam Workshop subscribers - [link](#)

Midas narrative pipeline – Dialogue runtime and tooling for a narrative radio game: Google Sheet script, web graph editor, one runtime running identically in Unity and Godot - [link](#)

Tower – A year of design research into radial grids: reusable Unity framework, six prototypes, a laser-cut board and a Playdate game - [link](#)

EDUCATION

New York University, Tisch School of the Arts – MFA in Game Design, *New York, NY* 2023 – 2025

Reichman University (IDC Herzliya) – BSc in Computer Science, *Herzliya, Israel* 2016 – 2020

- Zell Entrepreneurship Program: co-founded *Paladin*, a startup protecting children in online games.
